

Brown Affidavit – Schedule JWB-4

Accessible

Date: **October 18, 2002** Number: **CLECAM02-440**
Effective Date: **November 9, 2002** Category: **All**
Subject: **Coordinated Hot Cuts / Frame Due Time Requested – ISLC & 4 hour Commitment**
Related Letters: **NA** Attachment: **NA**
States Impacted: **Ameritech Region**
Response Deadline: **NA** Contact: **Local Operations Center**
Conference Call/Meeting: **NA**

Currently, CLECs have the opportunity to request a Coordinated Hot Cut (CHC) or Frame Due Time (FDT) when converting an existing POTS line from SBC_AIT to their service, as defined in ALs **CLECAM01-245**, **CLECAM01-155** respectfully. The majority of the time, the requested CHC is completed as requested using the existing facility conditions. On occasion, the request for a CHC cannot be accepted because the current facility utilized to provide the SBC_AIT service is served with facilities from a Integrated Digital Loop Carrier (IDLC) or Integrated Subscriber Loop Carrier (ISLC) systems which may not be compatible with a UNE 8db loop. The conversion to the CLEC can be completed with a re-arrangement of the existing facility, IDLC/ISLC to a copper facility. The rearrangement requires a dispatch of an outside installation technician, during this dispatch the technician will complete the facility change and will re-terminate any Inside Wire (IW) when applicable.

The scheduling of a outside technician cannot be easily coordinated as a CHC request, so therefore, the conversion from SBC-AIT to the CLEC is scheduled as an all day cut from 8am –5 pm (time zone specific within the state of SBC-AIT region). The CLECs have requested that the IDLC/ISLC conversions have smaller window for completion versus the all day conversion, this request allows for ease of coordination of the conversion with the end-user.

Effective, November 9, 2002, concurrently with the SBC-AIT regional implementation of standard and optional 4 hour commitment/appointment windows, the disallowed CHC to IDLC/ISLC conversions will move to a specific 4 hour commitment. Specifically, all disallowed CHC related to IDSLC/ISLC conversions will always be scheduled in the commitment hours of **10 am – 2 pm** (time zone specific within the state of SBC-AIT region). If the CLEC requires a different 4 hour commitment, then the CLEC must issue a supplemental copy of the LSR to change the assigned 10 am – 2 pm commitment. All existing procedures for CHC to IDLC/ISLC conversions will remain in tact and do not require any changes at this time.

The procedures for requesting 4 hour commitment/appointment are defined in AL **CLEAMS02-071**.

Shorter implementation on the notification was agreed to at the CUF on 10/16/02.
